SCORE OVER LENGTH SEARCHES

Attached is a score over length search. This search was developed to overcome limitations in most standard search systems which favor large sequences with high scoring, but lesser overall identity over smaller sequences with higher overall identity. This search is especially useful for relatively small nucleic acid or polypeptide target sequences (antisense, fragments, probes, primers, RNAi, epitopes, haptens, etc.) claimed functionally via a form of hybridization and/or identity language and having defined upper and lower polynucleotide and or polypeptide length limits.

The score over length search is performed by first running the query sequence using examiner-specified identity and polynucleotide or protein length limit parameters, and saving 65,000 hits and 0 alignments from each desired database. The resulting output is reformatted using a Microsoft Word macro and is imported into Excel. The summary table data are then sorted by the ratio of score of each hit sequence divided by its length and the accession numbers for all hits below the examiner's desired score over length parameters are deleted. The remaining accession numbers are used to pull the corresponding sequences from the databases into subdatabases enriched for good hits and the query sequence is re-run against these subdatabases to yield the final results.

The score over length cutoff for this search is 65%

Examiner Please Note: This cover sheet should be included when submitting results to be scanned.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                      October 18, 2004, 14:17:38; Search time 0.001 Seconds (without alignments) 0.352 Million cell updates/sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description

Patent No-Faralon

Patent No-Faralon

APPLICANT: THE ROCKEFELLER UNIVERSITY

TITLE OF INVENTION: MODULATORS OF BODY WEIGHT, CORRESPONDING

TITLE OF INVENTION: MOLEIC ACIDS AND PROTEINS, AND DIAGNOSTIC AND THERAPEUTIC USE

NUMBER OF SEQUENCES: 98

CORRESSONDENCE ADDRESS:

ADDRESSES: Klauber & Jackson

STREET: 411 Hackensack

CITY: Hackensack

COUNTRY: USA

COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MOLECULE TYPE: DNA (primer)
DESCRIPTION: sequence tagged-site specific PCR primer sWSS2359
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match 70.0%; Score 15.4; DB 1; Length 18; Best Local Similarity 94.1%; Pred. ioD: Experimental In addition to hair color in mice, the addition to hair color in mice, the Agouti gene is responsible for embryonic lethality, obesity, and the development of tumor in a wide variety of tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                      transition point of exon 1 from exon 2 in Agouti locus of mouse chromosome 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;

DENTIFICATION METHOD: Experimental
OTHER INFORMATION: In addition to hair color in mice, the
OTHER INFORMATION: Agouti gene is responsible for embryonic lethality, obesity,
OTHER INFORMATION: and the development of tumor in a wide variety of tissues.

Sequence 478, Application US/0838353

Patent No. 6010895

PAPLICANT: Deacon Nicholas J.

APPLICANT: Learmont, Jennifer C.

APPLICANT: Cooper, David

TITLE OF INVENTION: NON-PATHOGENIC STRAINS OF HIV-1

NUMBER OF SEQUENCES: 800

CORRESPONDENCE ADDRESS:

ADDRESSEE: Scully, Scott, Murphy & Presser

STREET: 400 Garden City Plaza

CITY: Garden City Plaza

STREET: 400 Garden City Plaza

COUNTRY: United States

ZIP: 11530

COMPUTER: EADABLE FORM:

MEDIUM TYPE: Floppy disk

COUNTRY: United States

ZIP: 11530

COMPUTER: IDM PC Compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Facture Release #1.0, Version #1.25

CURRENT APPLICATION DATA: 9606

FILING DATE: 14-FEB-1995

CLASSIFICATION HUMBER: 31,346

REGISTRAINON NUMBER: 31,346

REFERENCE/DOCKET NUMBER: 31,346

TELEFAX: (316) 742-433

TELEFAX: (316) 742-433

TELEFAX: (316) 742-436

TELEFAX: (316) 74
COMPUTER: IBM PC compatible
COMPRATING SYSTEM: PC-DOS/MS-DOS
COTRACTING SYSTEM: PC-DOS/MS-DOS
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/808,474A
FILING DATE: 03-MR-1997
ATTORNEY FAGENT INFORMATION:
NAME: Mayfield Denise L.

GENERAL INFORMATION:
APPLICANT: SRIVASTATA, SHIV
APPLICANT: MOUL, JUDD W.
APPLICANT: XU, LINDA L.
APPLICANT: SEGAMA, TAKEHIKO
TITLE OF INVENTION: PROTATE-SPECIFIC ANDROGEN-SIGNALING-ASSOCIATED
TITLE OF INVENTION: PROTATE-SPECIFIC ANDROGEN-SIGNALING-CURENT FILLS REFRENCE: 04995.0657-00000
CURRENT APPLICATION NUMBER: US/09/769,482
CURRENT FILLING DATE: 2001-01-26
                                            APPLICANT: Eiji OHARA
APPLICANT: Masanori WATAHIKI
TITE OF INVENTION: Method for Synthesizing cDNA from mRNA sample
FILE REFERENCE: 00162/HG
CURRENT APPLICATION NUMBER: US/09/508,753B
CURRENT FILING DATE: 2000-06-16
PRIOR FILING DATE: 1997-09-18
NUMBER OF SEQ ID NOS: 472

Sequence 480, Application US/08488551B

Patent No. 6015661

GENERAL INFORMATION:

APPLICANT: Nicholas J. Deacon
APPLICANT: David Cooper

TITLE OF INVENTION: NON-PATHOGENIC STRAINS OF HIV-1
NUMBER OF SEQUENCES: 841

CORRESPONDENCE ADDRESS:

ADDRESSEE: SCULLY, SCOTT, MURPHY & PRESSER

STREET: GARDEN CITY

CITY: GARDEN CITY

CITY: GARDEN CITY
                                                                                                                                                      COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

STRANDEDNESS: double stranded
TOPOLOGY: linear
MOLECTLE TYPE: genomic DNA
DESCRIPTION: superoxide dismutase gene (accession #
DESCRIPTION: J02947) nucleotides 21 to 31
HYPOTHETICAL: no
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        89 : FROM 1 TO 11

MOLECULE TYPE: genomic DNA
DESCRIPTION: 23s rRNA gene from Escherichia coli
DESCRIPTION: (Accession # M25458) nucleotides 212 to 223
HYPOTHETICAL: no
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         35.5%; Score 7.8; DB 1; Length 12; 81.8%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TOPOLOGY: linear
MOLECULE TYPE: genomic DNA
DESCRIPTION: 233 FRNA gene from Halococcus morrhuae
DESCRIPTION: (Accession # X05481) nucleotides 1628 to 1639
HYPOTHETICAL: no
ANTI-SENSE: no

Sequence 19, Application US/08938835A

Patent No. 6060245

GENERAL INFORMATION:

APPLICANT: SORGE, Joseph A.

APPLICANT: SORGE, Joseph A.

APPLICANT: SORGE, Joseph A.

APPLICANT: MULLINAX, Rebecca L.

ITILE OF INVENTION: METHODS AND ADAPTORS FOR GENERATING

TITLE OF INVENTION: SPECIFIC NUCLEIC ACID POPULATIONS

NUMBER OF SEQUENCES: 69

CORRESSEE: Finnegan, Henderson, Farabow, Garrett & ADDRESSEE: Dunner, L.L.P.

STREET: 1300 I Street, N.W.

CITY: Washington

STATE: D.C.

COMPUTER: BDC COMPUTER: ISONE: MEDIC COMPUTER: ISONE COMPUT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DB 1; Length 12;

Patent No.: 5856103
GENERAL INFORMATION:
APPLICANT: Gray, Donald M.
APPLICANT: Clark, Chris L.
TITLE OF INVENTION: METHOD FOR SELECTIVELY RANKING SEQUENCES
TITLE OF INVENTION: FOR ANTISENSE TARGETING
NUMBER OF SEQUENCES: 37
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DB 1; Length 10;
